Gabriel Rezende

Frontend Developer | React & TypeScript

Aracaju/SE, Brazil · gabrielrezendesobral@gmail.com · linkedin.com/in/gabriel-r-sobral

Dear Hiring Manager,

My name is Gabriel Rezende, a Mechatronics Engineer and frontend developer based in Brazil. I'm writing to introduce myself for frontend developer opportunities on your team. I believe my experience, my proactive attitude and my eagerness to grow make me a strong addition to it.

I currently work as a Software Developer at Pulsatrix, a CCTV and IoT company, where the frontend is the core of what I do. I built the frontend of **Conecte.Âncora**, a warehouse and work order management system, from scratch to production with React, Vite and TypeScript, including around 20 screens, route-level role-based access control, a drag-and-drop Kanban board and dashboards with CSV and PDF export. I also maintain **Conecte Mobile**, a React Native camera viewing app, where I fixed native UI and interaction issues on iOS and Android, integrated the frontend with a Node/Express REST API using JWT authentication, and led the App Store submission through approval.

I'm proactive and I take ownership beyond my scope. I investigated connectivity instability in our IoT fleet, measured latency and packet loss, and proposed both a short-term mitigation and a permanent fix. I've reviewed C# code in our desktop product, outside my main stack, identifying a calculation bug, a memory risk and a sensitive data exposure. I've also built internal AI-powered tools for the team, such as a support chatbot and a Python CLI. I care about the details: I review pull requests, refactor legacy code, diagnose production issues and document what I build.

I don't claim to have every answer, but I know how to find them. My main experience is with React, but I've repeatedly jumped into technologies I didn't know and delivered, and I'm ready to dive deep into your stack from day one. My background in business development and as commercial director of a junior consulting company also taught me that code exists to solve real problems for real customers, which is why I enjoy working on product-driven teams.

I'm not someone who settles into a comfort zone. I'm actively looking to broaden my horizons by working with international teams, and I'm open to relocating in the future. I work comfortably in English, and if language ever becomes a barrier, I'm fully committed to learning the company's native language so I can integrate with the team and grow together with the company.

I'd be glad to schedule a short video call at your convenience. Thank you for your time and consideration.

Best regards,
Gabriel Rezende
