# Gabriel Rezende

Junior Software Developer | Front-end React & TypeScript | AI-Assisted Development

Aracaju/SE, Brazil · gabrielrezendesobral@gmail.com · linkedin.com/in/gabriel-r-sobral

## SUMMARY

Junior developer with a degree in Mechatronics Engineering, working on the development and maintenance of web and mobile applications (React, TypeScript and React Native) at a technical products company (CCTV, IoT and operations management). I use **Claude (Anthropic)** as a core tool in my development workflow to generate, review, refactor and optimize code, diagnose production issues and document systems, always with critical validation and review of every deliverable. Hands-on experience integrating REST APIs and LLM APIs, Python automation and Git version control. Hands-on and organized, with an engineering background and a fast learning curve for new stacks and tools.

## TECHNICAL SKILLS

**Languages:** JavaScript, TypeScript, Python, SQL

**Frontend & mobile:** React, Vite, React Native/Expo (bare workflow), HTML5, CSS3

**AI-assisted development:** Claude (Claude Code and Claude.ai) for generating components and screens, code review, refactoring, optimization, debugging and technical documentation; prompt engineering and context setup for coding tasks; validation of AI-generated code

**Generative AI & LLMs:** Integration with model APIs (Anthropic Claude and external providers), local models via Ollama, multi-agent systems, AI search and knowledge-base chatbots

**Integrations & APIs:** REST API consumption, JWT authentication, native Android/iOS modules integrated with third-party SDKs (Intelbras and Hikvision)

**Databases:** SQL queries in PostgreSQL, diagnosis of data inconsistencies and discrepancies between environments

**Automation & scripting:** Python (CLI and integrations), spreadsheet automation for data processing, image processing pipelines

**Code reading & review:** C# / .NET (WPF)

**IoT:** MQTT connectivity investigation on ESP8266 devices

**Tools:** Git (Bitbucket and GitHub), Docker (ARM64 deployment on Raspberry Pi), Jira, ClickUp, Obsidian

## PROFESSIONAL EXPERIENCE

**Pulsatrix Tecnologia da Informação** Mar 2026 – Present

*Software Developer (React Native / React) | Aracaju/SE*

- **AI-assisted development day to day:** use of Claude (Claude Code) to speed up building screens and components, refactor legacy code, review pull requests, investigate bugs and produce technical documentation, while keeping human review, testing and project standards on every deliverable.
- Development and maintenance of **Conecte Mobile** (React Native/Expo, bare workflow), a camera viewing app integrated with native Intelbras and Hikvision SDKs, used by the company's customer base.
- Implementation of authentication rules in the app: single-device login per account, automatic login fallback between saved accounts and a mandatory password expiration policy (90 and 180 days).
- Fixes to native behavior on iOS and Android: freezing on the password screen, blocked navigation gesture, duplicate back button, tab bar area inflation and accelerometer-based orientation and fullscreen detection.
- Led the app's App Store submission through approval, addressing review feedback (metadata, demo credentials, icon and screenshots).
- Built the frontend of **Conecte.Âncora** (React + Vite + TypeScript), a warehouse and work order management system, from scratch to production, with Claude's support for component structuring and refactoring: about 20 screens, route-level role-based access control (RBAC), a drag-and-drop Kanban board for status changes and management dashboards with CSV and PDF export.
- Integration of the frontend with the REST API maintained by the backend team (Node/Express and PostgreSQL), replacing mocked data with real calls and handling JWT authentication and role-based permissions.
- Took part in migrating the legacy warehouse system from Google Apps Script to a web application consuming a REST API with JWT authentication, with a new visual standard, a permission system and a Docker deployment pipeline.
- Analysis and diagnosis of production issues, using AI to raise hypotheses and speed up investigation: a migration system that tracked executions by file name, discrepancies between development and production databases, enum and decimal precision inconsistencies and improper permission grants in the authentication context.

- Investigation of connectivity instability in the company's IoT fleet (ESP8266 devices via MQTT): measured latency and packet loss against the Europe-hosted broker and proposed mitigation by tuning session parameters via OTA update, with migration of the broker to a South American region as the permanent fix.
- Code review in C# / .NET (WPF) on the **Conecte Desktop** product, with AI support, identifying a duration calculation error, a risk of unbounded memory consumption and exposure of sensitive data in an unencrypted file.
- **Internal tools with generative AI:** a support chatbot with a knowledge base, AI search and guided troubleshooting flows; a Python CLI with specialized agents to support the team; and automation of DVR credential spreadsheets (type handling, composite keys and deduplication).
- Docker deployment (ARM64), technical documentation of products and processes and tracking of my own tasks in Jira and ClickUp.

**Radix** Aug 2024 – Jan 2026

*Business Development Intern | Rio de Janeiro/RJ*

- Preparation and presentation of technical and commercial proposals across the company's business areas.
- Supported the technical team in project resource estimates and took part in site visits and scoping meetings.
- Market research, opportunity mapping and prospecting, and production of marketing materials for the company's solutions.

**Projet Consultoria Jr.** Jun 2023 – Jan 2025

*Commercial Director and Project Member | Aracaju/SE*

- Worked on consulting projects for real clients, from requirements gathering to solution delivery.
- As commercial director (Jan 2024 – Jan 2025), identified client pain points, performed market analysis and defined scope with the board.
- As advisor to the development board, supported continuous improvement of internal processes and the team's technical training.

## PERSONAL PROJECTS

**AI Dev Team — multi-agent CLI** Completed

*Python, Ollama, LLM APIs | personal project*

- Command-line tool with specialized agents (tech lead, developer, QA and reviewer) that simulates a development team, running local models via Ollama with automatic fallback to external LLM providers.

**Caixa — personal finance app** In development

*React Native/Expo, SQLite, native Android service | personal project*

- 24-page technical specification, written with Claude's support, including architecture decision records (ADRs), SQLite database DDL, a local JSONL queue architecture and sprint planning.
- Functional design based on a daily spending limit engine, expense concentration diagnostics and a set of alert rules, with transaction capture through a native Android notification-reading service.

## EDUCATION

**Universidade Tiradentes (UNIT)** Jan 2021 – Dec 2025

*Bachelor's Degree in Mechatronics Engineering | Aracaju/SE*

## CERTIFICATIONS & LANGUAGES

**Certifications:** C# Complete Course: Beginner to Advanced · React Native: Building Apps from Zero to Advanced · Power BI Applied to Business · Lean Six Sigma White Belt

**Languages:** Portuguese (native) · English (full professional) · Spanish (basic)
